-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Art Unit: 2833

1. Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details. The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. Claims 1-15 are objected to because of the following informalities:

- On line 1 of claim 1 and each of the dependent claims, it appears that -a- should be inserted after *of*.
- On line 3 of claim 1, it appears that "on" should be -in-.
- On line 4 of claim 1, it appears that -the- should be inserted after *of*.
- The use of "assumed" (claim 1, line 6, etc.) renders a claim unclear since there is no certainty as to whether the structure is part of the claim.
- Claim 1 lacks antecedent basis for "the rear end" on lines 13 and 14.
- Claims 7-15, which only include limitations for a housing, do not further limit the contact structure of claim 1.
- In general, the claims are written in a confusing manner.

Appropriate corrections are required.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary

skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miller in view of Lai. The contact of Miller comprises a body 12, and a tab formed by folding the blank. The tab forms a base plate with a protruding part 50 and contact plate above the base plate. The body does not form a barrel. However, the similar contact of Lai teaches the use of a barrel which forms a more secure attachment to a wire. It would have been obvious to use a barrel on the body of Miller as taught by Lai in order to improve the wire connection at that end. In regard to claims 2 and 3, it is noted that neither the depth direction nor the width direction are defined in the claims and therefore, given an appropriate definition, either claim can describe the contact of Miller.
